

MAINTENANCE FILE THE TABLE

POINTS OF ATTENTION DURING USE

- Move the table with at least 4 people.
- Lift the table and do not drag it.
- Make sure all feet touch the ground at all times.
- Do not stand on top of the table.
- Avoid contact of hard objects with the metal frame. Do not leave objects on the table for too long. The wood will not be able to breathe and may stain.
- In direct sunlight, the wood will darken during the first weeks after installation. Objects left on the table can leave a lighter print. This will disappear by itself after exposure to the sun.
- Wipe off any stains on the wood immediately
- Large - maximum 12 people
- Medium - maximum 10 people
- Small - maximum 8 people

BOTTOM MAINTENANCE

PROPERTIES

- Metallised and powder-coated steel.
- Stainless steel fasteners.
- Rubber washers.
- Stainless steel + plastic levelling feet.

MAINTENANCE

- Clean the base with warm water.
- Use non-abrasive soap for stubborn stains.
- Do not use an abrasive sponge but a soft sponge or wipe.
- Clean off rust stains with cleaning vinegar.
- Minor damage can be touched up with a paint pen in the same RAL colour.

WOOD MAINTENANCE

EIGENSCHAPPEN

- Afzelia doussié is a hardwood species with the highest durability class 1 and is very insensitive to mould.
- Afzelia doussié is among the most stable woods available on the market.
- The wood is carefully selected and checked for stains, cracks and snapwood.
- The wood will naturally age evenly without treatment.
- The wood does not need to be treated to retain its durability.
- Wood is a natural product and can even start to crack due to further drying after installation.
- Afzelia contains a dye that partially dissolves in water and may separate when it rains.*

TREATMENT

The wood of our tables is delivered untreated, it will grey over time. This process occurs evenly and, with regular maintenance, gives a beautiful result.

If this effect is not desired, you can choose to treat the planks yourself with a product. If you want to preserve the original colour of the wood, the treatment should be done before it starts to grey.

Ask a specialist retailer about the possibilities.

The following products were tested by Wünder and found to be good for treating The Table:

1. RMC Hybrid Wood Protector from the Rubio Monocoat brand. Colour teak of pure. This product enhances the colour of the wood and stops ageing for about 1 to 2 years.

2. Deck care from the Horsemen brand. This product does not stain the wood but repels water, allowing the wood to age more evenly.

MAINTENANCE

Regularly cleaning the wood will preserve its original colour for longer.

- Use green soap to remove grease stains from the wood. Leave the soap on for 15 minutes and clean with a soft brush. Always follow the direction of the wood grain. Then rinse the wood with water.
- Grease stains that are noticed immediately can be cleaned off with a damp chamois and washing-up liquid.
- Do not use aggressive agents to clean the wood.
- Do not use a high-pressure cleaner to avoid damaging the wood fibres.
- After some time, the untreated wood will turn grey. To give it back its original colour, it can be sanded.
- If possible, cover the table during winter.

*** PLEASE NOTE**

Afzelia boards may contain afzelines. This is a substance that fills natural cracks in the wood. Rain can wash the substance out of the wood and stain the surface.

These stains will be washed away by rain after some time.

On most surfaces, the stains can be removed immediately with chlorine bleach.
